

NAME

sr-listservers.rb – List active Scriptroute servers

SYNOPSIS

sr-listservers.rb [-n]

DESCRIPTION

List the active scriptroute servers. This is primarily an example of how to use the ServerList entries in srclient.

OPTIONS

-n Do not look up hostnames for the IP addresses of each server. Much like netstat -n or traceroute -n, using this option makes the script faster, but less friendly.

BUGS

Send bug reports or suggestions to <bugs@scriptroute.org>.

AUTHOR

Neil Spring <nspring@cs.washington.edu>
